Appendix A - 2045 Demographic Projections

For this 2045 RTP update, NJTPA updated and extended the demographic (population, household, and employment) forecasts for the region. These forecasts were created in consultation with our regional and county partners and used NJTPA's updated Demographic and Employment Forecast Model (DEFM) to help allocate county level forecasts to the local level. The process for developing forecasts was split into two processes: the creation of county-level forecasts and the allocation of those forecasts to a Traffic Analysis Zone (TAZ) and municipal level.

County-Level Forecasts

The county-level forecasts were based on updated modeling completed in early 2015 by the New York Metropolitan Transportation Council (NYMTC) in partnership with the NJTPA.

Employment forecasts were created by first creating a 2013 benchmark based largely on the Bureau of Labor Statistics (BLS) Current Employment Statistics with other data sources (e.g. Census data) used to supplement the results based on known deficiencies in the BLS data. Forecasts were created by averaging the third party forecasts from three sources: IHS-Global Insight, Moody's, and the Bureau of Labor Statistics (BLS) and applying the changes derived from these forecasts to the benchmark. Population forecasts were derived from a cohort component analysis based on estimates of births, deaths and net migration. The analysis looked at current rates, recent trends and labor demand, to help determine the appropriate rates of change for each of these population components. Household forecasts were based on applying historical age-based household formation rates to age-based population estimates.

Except for New York City, NYMTC's analysis did not consider land use constraints. Therefore, after consultation with county planners and regional agency partners, the resultant county level forecasts were shifted between counties based on known limitations (e.g., Highlands building constraints) and made use of analysis work completed for the 2040 forecast efforts to help with these adjustments. Recent development pattern changes (e.g., high growth in Urban Core, lower growth in west) were incorporated during this adjustment process. Testing was performed to examine the travel pattern implications of the forecasts, particularly Trans-Hudson travel.

The county-level forecasts were sent to county planners and regional agencies late 2014 with final agreement reached in February 2015.

Allocation of county-level forecasts to the TAZ and Municipal levels

Once the county-level control total forecasts are established, they need to be allocated to the TAZ and municipal levels. NJTPA uses the Demographic Employment Forecast Model (DEFM), enhanced in 2011, to help with the allocation process. The model uses historical census data, land use data, anticipated development data, density estimates, and travel demand model information to allocate growth in the region. During the summer 2015, NJTPA requested detailed zoning and development information from each sub-region to help with the process of allocating the county-level control totals to the TAZ and municipal levels.

The allocation process is an iterative process that involves a great deal of GIS and spreadsheet analysis. Since the available data is different among counties, the analysis process varies slightly between counties but, in general, involves estimating current land uses (including eliminating preserved areas) and estimating residential and employment densities that can be applied to future growth in available vacant land and redevelopment areas. The DEFM allocates growth based on the characteristics of each TAZ, (e.g., historical growth rates, available land, transit/highway connectedness). Known developments are also considered in the allocation process. The model results are evaluated for reasonableness and adjustments are made when necessary. These draft forecasts are reviewed by county planners and regional agencies for reasonableness and adjustments are made based on their input. Agreement is reached when all reviewers find the forecasts reasonable.

The following tables show the updated 2045 household, population and employment forecasts by county and muncipality.

County	Municipality Code	Municipality Name	2015 Population	2045 Population	Annualized % Population Change 2015-2045	2015 Households	2045 Households	Annualized % Household Change 2015-2045	2015 Employment	2045 Employment	Annualized % Employment Change 2015-2045
